

SKILLS FRAMEWORK FOR INFOCOMM TECHNOLOGY TECHNICAL SKILLS & COMPETENCIES (TSC) REFERENCE DOCUMENT

TSC Category	Development and Implementation					
TSC Title	Network Configuration					
TSC Description	Configure network hardware and software components according to organisational guidelines and technical requirements. This includes the implementation and configuration of multiple servers, network devices and network management tools as well as the management of user network access to ensure stable and reliable network operations					
TSC Proficiency Description	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6
		ICT-DIT-2009-1.1	ICT-DIT-3009-1.1	ICT-DIT-4009-1.1		
		Perform basic configuration of network components and monitor user network access	Implement and configure servers and devices in line with network blueprint, and manage user network access	Evaluate organisational network requirements and develop a network configuration blueprint		
Knowledge		<ul style="list-style-type: none"> Basic techniques in network configuration Basics of user network access Types and usage of network management tools Elements of network testing 	<ul style="list-style-type: none"> Key network components – their functions and interdependencies Techniques in implementation and configuration of servers, devices and other network components Features of network management tools Configuration of network servers and devices Network access management Network tracking and assessment tools 	<ul style="list-style-type: none"> Industry network standards Blueprint development techniques for networks and their components and connections Key considerations in user network access Pros, cons and applicability of network management tools Best practices in network reporting and assessment 		
Abilities		<ul style="list-style-type: none"> Carry out basic configuration of servers and devices in accordance with vendor and organisational specifications Support user network access according to organisational specifications Use network management tools appropriately 	<ul style="list-style-type: none"> Translate the organisational requirements to technical requirements Identify the key network components to be configured to meet the technical requirements Implement multiple servers and devices in line with the organisation's network blueprint 	<ul style="list-style-type: none"> Determine organisation's network requirements and priorities Develop a configuration blueprint for multiple servers and devices, in accordance with vendor and organisational specifications Establish guidelines for user network access in accordance with 		

**SKILLS FRAMEWORK FOR INFOCOMM TECHNOLOGY
TECHNICAL SKILLS & COMPETENCIES (TSC) REFERENCE DOCUMENT**

		<ul style="list-style-type: none"> Report network status in accordance to established protocols Conduct basic tests on the network to verify their reliability and ability to meet organisational requirements 	<ul style="list-style-type: none"> Manage user network access in accordance to organisational guidelines and specifications Identify suitable network management tools to be used Implement procedures to ensure regular network reporting, administration and assessment of stability 	<ul style="list-style-type: none"> organisational specifications Evaluate network management tools to be used in accordance with industry and organisational standards Design procedures for regular network reporting and metrics or indicators for assessing reliability and stability of network 		
Range of Application	Types of networks may include but are not limited to: <ul style="list-style-type: none"> LAN network (e.g., SOHO network, WLAN) Radio network Telecommunications network Next generation network (NGN) Wide area network (WAN)
